

**SYSTEM AND METHOD FOR PROVIDING ACCESS TO FORMS FOR
DISPLAYING INFORMATION ON A WIRELESS ACCESS DEVICE**

Abstract

A system and method for enabling users to send and receive messages
5 and other information from mobile devices and enabling users to access server-based
information using mobile devices over wireless data networks are disclosed. The
present invention provides a system and method for enabling users to access forms for
displaying information on a wireless device, such as a mobile phone, interactive
10 pager, PDA or other wireless device, via a wireless service provider. The forms of the
present invention may facilitate a user's ability to retrieve, view and send various
types of information from a wireless client device. Different types of forms may
include facsimile, memorandum, invitation, user profile and other applications.
Forms for each application may include predetermined form fields that are specific to
each application. Forms may be created, modified and forwarded (or sent) to one or
15 more selected recipients. Other operations may also be performed.
